SCRIPT REVIEW · VALUE PER SECOND

Your 15 Scripts, Improved

Every script rewritten for value per second, with one strong message doctors will remember. Each one includes the core message, what changed and why, a timed script with on-screen text, CTA, caption, and a before/after score.

Prepared for Dr. Azka · 1 November 2026
Your file contained 15 scripts (section 2b had two), so all 15 are here. Your original text is in the appendix.

Summary

#	Script	Stage	Length	Score
1b	4 things doctors post that quietly push patients away	TOFU	~40 s	7 → **9**
2b-A	If I had to grow a dental clinic from zero	MOFU (was BOFU)	~45 s	8 → **9.5**
2b-B	How I'd grow a dermatologist's Instagram from zero in 30 days	MOFU	~55 s	5 → **8.5**
3b	Doctors who aren't confident on camera	MOFU	~45 s	6 → **9**
4b	If I were a dermatologist, this is what I'd post this week	TOFU	~45 s	7 → **9**
5b	Why Dubai doctors need strong online visibility	MOFU	~45 s	6 → **9**
6b	The doctor vs influencer test	BOFU	~40 s	8 → **9**
7b	200K views and zero patients isn't a win	TOFU / BOFU	~45 s	8 → **9.5**
Clinic 1	Multi-doctor clinics: don't make your page only about the owner	TOFU	~40 s	6 → **9**
Clinic 2	30-day profile breakdown for a cosmetic dentist	BOFU	~60 s	5 → **8.5**
Clinic 3	Day 1 of building a clinic brand: I don't film anything	MOFU	~40 s	8 → **9.5**
4	Two dermatologists, same content: one is booked for weeks	MOFU	~40 s	8 → **9.5**
5	One personal message beats ten promotions	MOFU	~40 s	9 → **9.5**
6	Using AI in your clinic: green, amber or red flag?	TOFU	~55 s	5 → **9**
7	7 systems a $30k+/month clinic needs	BOFU	~55 s	7 → **9**

The 5 biggest patterns across your scripts

1. **Your instincts are strong.** Scripts 4, 5, 7b and Clinic 3 were already good. The best ones name a specific situation doctors recognise (the 'I'll think about it' patient, the 20%-off broadcast).
2. **Slow openings.** Several started with 'Imagine…' or context before the point. Every improved hook now states the tension in the first 2 seconds.
3. **Too long for a Reel.** 2b-B and 7 were roughly 2 minutes. Reels should be 30–60 seconds; one idea per breath.
4. **Borrowed wording.** Clinic 2 and Script 6 were very close to other creators' videos. They're now in your own words, with your doctor's reasoning. That's your edge.
5. **Claims to check.** Follower promises ('10k in 30 days'), statistics (Dubai 691,000) and naming a real doctor all need proof or permission. Each one is flagged ⚠.

> **How to read each script**
>
> Time code · what you SAY · what's ON SCREEN (OST) or the visual. Read the spoken column aloud and time it. If you go over the length shown, cut a line, don't speed up.

Keyword CTAs ('comment TEST', 'comment VIEWS'...)

Only use a keyword CTA if the resource (checklist, tracker, PDF) is ready to send the same day. Otherwise use the question or 'send this to...' CTA instead. A doctor who comments and never gets the file won't trust you again.

SCRIPT 1B · TOFU · ~40 S

4 things doctors post that quietly push patients away

Format: Talking head, fast cuts. One big on-screen word per point. **Score 7 → 9**

Core message: Patients book the doctor who makes them feel safe, not the one who entertains them.
Value check: Doctors get a one-question test they can apply to every post before publishing.

What I changed and why

- Cut each point to one 'what' line + one 'why' line, so there's no dead time between points.
- Made the safety test the payoff, at the end, so viewers stay for it (an open loop from the hook).
- Softened 'trends' so trend-loving doctors don't feel attacked: the problem is trends with no message.
- Replaced the generic 'Save this' with an action: audit your last 9 posts.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–2s	Four things you're posting right now are quietly sending patients to another doctor.	OST: “4 posts that push patients away” · Visual: scroll a doctor's grid, freeze
2–10s	One. Trending dances and skits. Trends aren't the problem, but someone about to book a procedure is asking one question: is this doctor serious? A skit makes them hesitate.	OST: “1. Trends with no message”
10–16s	Two. Generic tips. ‘Use retinol for glowing skin.’ Any account can say that. It shows nothing about how YOU think.	OST: “2. Generic tips”
16–22s	Three. Jargon. If a patient needs Google to understand your caption, they won't message you. They'll scroll.	OST: “3. Jargon”
22–31s	Four. Before-and-afters with no explanation. Patients don't just want the result. They want your judgment: why this treatment, why this plan.	OST: “4. Results with no reasoning”
31–38s	So before you post anything, ask one question: would a nervous patient feel safer after watching this? If not, don't post it.	OST: “Would a nervous patient feel SAFER?”
38–42s	Open your last nine posts and run the test today.	OST: “Check your last 9 posts”

CTA: Save this and run the test on your last 9 posts before your next filming day.

Caption: Patients don't book the most entertaining doctor. They book the one who makes them feel safe. Here are 4 posts that work against you, and the one question to ask before you post anything.

SCRIPT 2B-A · MOFU (WAS BOFU) · ~45 S

If I had to grow a dental clinic from zero

Format: Talking-head intro → whiteboard / screen recording with numbered steps. **Score 8 → 9.5**

Core message: Content decides who reaches out. Your reply speed decides who actually books.
Value check: A dentist gets a 5-step order of operations they can start this week.

What I changed and why

- Re-labelled MOFU: it teaches. A BOFU video should prove results or make an offer.
- Made step 3 safer and more useful: give a price range and what affects it, not one fixed price.
- Made step 5 measurable: 'reply within minutes during clinic hours, and offer two appointment times'.
- Ended on your signature idea, which links content to your AI systems offer.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–3s	If I had to take a dental clinic from zero to a full schedule, these are the five things I'd do, in this order.	OST: “Dental clinic from zero: 5 steps” · Visual: blank profile
3–10s	One. Fix the profile. Name field: ‘Dr. Name, Implant Dentist, City’. That's what patients type into search.	OST: “1. Searchable profile”
10–16s	Two. Pick ONE high-value treatment, like implants or veneers. Not twelve. Be known for something first.	OST: “2. One flagship treatment”
16–25s	Three. Answer the three questions every patient has: how much, does it hurt, how long does it take. Three videos. For price, give a range and what changes it.	OST: “3. Cost · Pain · Time”
25–31s	Four. Show the clinic, not just the dentist. The chair, the team, the room. Nervous patients relax when they've seen the place.	OST: “4. Show the clinic”
31–38s	Five. Make the next step obvious, one link or one DM keyword, and reply within minutes, with two appointment times.	OST: “5. Fast reply + 2 slots”
38–45s	Because content decides who reaches out. How fast you reply decides who actually books.	OST: “Content → inquiry. Reply → booking.”

CTA: Send this to a dentist who's posting but not getting bookings.

Caption: Most dental clinics start with filming. I'd start with the profile, one flagship treatment and a fast reply system. Here's the exact order.

SCRIPT 2B-B · MOFU · ~55 S

How I'd grow a dermatologist's Instagram from zero in 30 days

Format: Talking head + simple on-screen framework graphics (3 colour-coded boxes: Reach / Trust / Bookings).

Score 5 → 8.5

Core message: Every video needs one job: reach, trust or bookings. Posting more isn't the goal.
Value check: Doctors see how professional content planning works and get the 3-job rule to apply immediately.

What I changed and why

- Cut from ~2 minutes to under 60 seconds. The original explained your agency process in too much detail for a Reel.
- Removed jargon doctors don't use (TOFU/MOFU, 'niches and sub-niches') and replaced it with plain words: Reach, Trust, Bookings.
- Removed the '10k followers in 30 days' promise. It's hard to guarantee and attracts follower-focused doctors, not the patient-focused ones you want. Use it only once you have a real case study.
- Added the 5x outlier rule as a concrete, impressive detail doctors won't know.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–3s	If I had to grow a dermatologist's Instagram from zero in 30 days, I wouldn't film anything in week one. Here's what I'd do.	OST: “Derm from zero: the 30-day plan”
3–15s	First, research. I'd find the top dermatology creators and pick their 15 to 20 best videos, the ones with five times more views than followers. Those are proven. I'd note the hook, the format and the topic.	OST: “Step 1: Find what's proven (5× rule)”
15–25s	Second, a plan. From that research I build 10 content pillars: myths, concerns, treatments, the doctor's story, and so on. So you never run out of ideas.	OST: “Step 2: 10 pillars”
25–42s	Third, and this is what most doctors miss, every video gets ONE job. Reach: B-roll, trends, ratings, so new people find you. Trust: talking-head education and patient stories. Bookings: case studies and procedure breakdowns.	OST: 3 boxes: “REACH · TRUST · BOOKINGS”
42–50s	Then I spread those across a 30-day calendar, about 40 pieces, so every week has all three.	OST: “Step 3: 30-day calendar, ~40 posts”
50–55s	Posting more isn't the goal. Every video needs a job.	OST: “Every video needs a job.”

CTA: Comment FRAMEWORK and I'll send you the 30-day breakdown. (Only use this if you have the PDF ready to send.)

Caption: The difference between posting and having a strategy: every video gets one job. Reach, trust or bookings.

SCRIPT 3B · MOFU · ~45 S

Doctors who aren't confident on camera

Format: Talking head, warm and personal. Natural light. One B-roll of you setting up the camera. **Score 6 → 9**

Core message: You don't need to become a presenter. Talk to the camera like you talk to one patient in consultation.
Value check: Doctors get a mindset shift plus 3 practical things to do on their next filming day.

What I changed and why

- Fixed the logic: the original said you imagine talking to doctors, then told viewers to talk to patients. Now it's one clear idea: talk to ONE patient, like in consultation.
- Added 3 concrete tips. The original was all mindset and gave nothing to do.
- Shortened the medical-school intro to one line. It builds connection, but it was taking 10+ seconds.
- Gave it a closing line doctors will remember.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–3s	If you're a doctor who feels awkward on camera, I felt exactly the same. Here's what fixed it.	OST: “Awkward on camera? Same.”
3–10s	We studied anatomy, physiology, pharmacology. Nobody taught us cameras. So feeling stiff is normal, not a sign you're bad at this.	Visual: you setting up your phone
10–22s	What changed it for me: I stopped thinking I was talking to ‘an audience’. I picture one patient sitting across from me in consultation. You've had that conversation hundreds of times. You already know how to do it.	OST: “Talk to ONE patient”
22–38s	Three things that help. One: put a person or a photo behind the camera and talk to them. Two: do three warm-up takes, and never use take one. Three: one point per video, so you're not memorising a speech.	OST: “1. Someone behind the camera · 2. Never use take 1 · 3. One point per video”
38–45s	You don't need to become a presenter. You just need to be the doctor you already are, on camera.	OST: “Be the doctor you already are.”

CTA: Follow: I'm sharing my full process for doctors who want to feel confident on camera.

Caption: Nobody taught us cameras in medical school. Here's the mindset shift and 3 small habits that made it easier for me.

SCRIPT 4B · TOFU · ~45 S

If I were a dermatologist, this is what I'd post this week

Format: Talking head + a weekly calendar graphic that fills in day by day. **Score 7 → 9**

Core message: A week of content should build trust, not just views, and every day has a purpose.
Value check: A dermatologist gets a ready-made Monday–Saturday plan.

What I changed and why

- Fixed a mismatch: the hook said five posts, the script listed six days. Now it's 'six posts'.
- Gave every day a 3–5 word label for the on-screen calendar.
- Turned the 70/20/10 explanation into one line. It was the slowest part of the video.
- Kept your consent and 'results vary' note on the transformation post. That's good practice.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–3s	If I were a dermatologist starting Monday, these are the six posts I'd make this week.	OST: “Derm content: this week's 6 posts” · Visual: empty calendar
3–8s	Monday: one myth your patients keep repeating. Correct it simply.	OST: “MON: Bust a myth”
8–16s	Tuesday: a transformation. Show the result first, then how you got there. With patient consent, and say results vary.	OST: “TUE: Result first”
16–22s	Wednesday: what a first consultation actually looks like. People book when they know what to expect.	OST: “WED: Inside the consult”
22–27s	Thursday: one question a patient asked you this week. Under 30 seconds.	OST: “THU: Patient question”
27–32s	Friday: your story. Why dermatology? A day in your life.	OST: “FRI: Your story”
32–38s	Saturday: recreate an educational format that's already working in your niche.	OST: “SAT: Proven format”
38–45s	Mostly proven formats, some of your own winners, a few experiments. That's a week that builds trust, not just views.	OST: “70% proven · 20% your winners · 10% new”

CTA: Save this as your Monday plan.

Caption: Six posts, six purposes. Here's the week I'd plan if I were a dermatologist starting from scratch.

SCRIPT 5B · MOFU · ~45 S

Why Dubai doctors need strong online visibility

Format: Talking head + split screen of two clinic profiles (mock-ups) + the statistic on screen. **Score 6 → 9**

Core message: International patients choose a Dubai doctor online before they ever contact the clinic.
Value check: Dubai clinic owners understand the medical-tourism opportunity and get 3 self-check questions.

> **⚠ Before posting**
> Verify the 691,000 figure, the year and the 'top specialties' claim against the latest official DHA report, and cite it in the caption.

What I changed and why

- Turned the slow 'Imagine someone...' opener into a direct, visual comparison hook.
- Added the source to the statistic. Please verify the exact figure and year against the latest DHA report before posting.
- Fixed grammar and shortened the 3 self-check questions.
- Made the CTA specific to the people you want (Dubai dermatologists and cosmetic dentists).

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–3s	Two Dubai clinics. Same treatment. A patient flying in from London picks one in about 30 seconds. Here's how.	OST: “Clinic A or Clinic B?” · Visual: two profiles side by side
3–12s	One doctor shows up everywhere: clear, evidence-based content, strong reviews. The other has a profile that looks like every other clinic.	Visual: highlight Clinic A, fade Clinic B
12–18s	The patient has never met either doctor. Their first impression is 100% online.	OST: “First impression = online”
18–28s	And in Dubai, that patient might not be local. The Dubai Health Authority reported hundreds of thousands of international health tourists, with dermatology and dentistry among the most in-demand specialties.	OST: “691,000+ health tourists (DHA)”: verify before posting
28–38s	So ask yourself: is my expertise obvious on my profile? Can a patient tell what I treat? Would they trust me before messaging?	OST: “Expertise clear? Treatments clear? Trust before contact?”
38–45s	If any answer is no, your online presence is costing you patients you'll never even hear about.	OST: “Patients you'll never hear about”

CTA: If you're a dermatologist or cosmetic dentist in Dubai and want your online presence to match your real expertise, DM me ‘DUBAI’.

Caption: Dubai patients, local and international, compare doctors online before they ever call. Is your profile winning that comparison?

SCRIPT 6B · BOFU · ~40 S

The doctor vs influencer test

Format: Screen recording of a profile + talking head. A score counter on screen (0/3 → 3/3). **Score 8 → 9**

Core message: Your Instagram shouldn't make you look famous. It should make patients trust you.
Value check: Doctors self-audit their page in under a minute with a 3-part test.

What I changed and why

- Removed the duplicated hook line (it was said twice).
- Made the scoring visual (✔/✖ per test) so it works with the sound off.
- Kept the TEST keyword CTA. Make sure the one-page checklist is ready before posting.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–3s	Open your Instagram. In ten seconds, does it look like a doctor's page, or an influencer's?	OST: "Doctor page or influencer page?" · Visual: two grids
3–11s	Test one: look at your profile for five seconds. Can a stranger tell your specialty and your city? If not, that's a miss.	OST: "1. Specialty + city in 5 sec?" ✔/✖
11–19s	Test two: look at your last nine posts. How many are about a patient's problem, and how many are about a trend or a sound?	OST: "2. Last 9 posts: patient problems?" ✔/✖
19–27s	Test three: if a patient had one minute on your page, would they trust you with their face, their teeth, their surgery?	OST: "3. Trust in 60 seconds?" ✔/✖
27–33s	Two or more misses means your page is working against you. The good news: it's fixable.	OST: "2+ misses = fix it"
33–40s	Your Instagram shouldn't make you look famous. It should make patients trust you. Patients book on trust.	OST: "Famous ≠ trusted"

CTA: Comment TEST and I'll send you the full one-page checklist.

Caption: Fame and trust are different goals. Here's a 3-part test to see which one your page is chasing.

SCRIPT 7B · TOFU / BOFU · ~45 S

200K views and zero patients isn't a win

Format: Talking head + dummy analytics screen + funnel graphic (views → visits → DMs → bookings).

Score 8 → 9.5

Core message: Views are attention. Patients are the result. Track the whole path, not the top number.

Value check: Doctors learn the real funnel and 3 fixes to turn views into bookings.

What I changed and why

- Used the contrast (200K & 0 vs 1,000 & 2) as on-screen text in the first frame, the strongest visual hook.
- Shortened the 'my account' example to one line so it doesn't drift from the doctor's problem.
- Kept your 3 fixes, made each one a single line.
- Label analytics as example numbers on screen to stay honest.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–3s	A Reel with 200,000 views and zero patients isn't a win. It's an expensive compliment.	OST: “200K views · 0 bookings vs 1K views · 2 bookings” (example numbers)
3–10s	I see doctors celebrate views all the time, and I get it. But how many of those 200,000 people could actually walk into your clinic?	Visual: map, most dots far away
10–17s	I make content only for doctors because they're my audience. Same rule for you: speak to the patients you actually want.	OST: “Right audience > big audience”
17–25s	Track the real path: views, profile visits, DMs, calls, bookings. That's your funnel.	Visual: funnel graphic
25–38s	Then fix three things. Name your treatment in the hook so the right patient stops. Give one clear next step. And reply fast, because a patient who waits messages someone else.	OST: “1. Treatment in hook · 2. One next step · 3. Fast reply”
38–42s	Views are attention. Patients are the result.	OST: “Views = attention. Patients = result.”

CTA: Comment VIEWS and I'll send you my views-to-patients tracker.

Caption: Views feel good. Bookings keep the clinic running. Here's how to track the difference.

SCRIPT CLINIC 1 · TOFU · ~40 S

Multi-doctor clinics: don't make your page only about the owner

Format: Talking head + simple diagram: Owner brand ↔ Clinic brand with 3–5 doctor faces. **Score 6 → 9**

Core message: The owner's personal brand builds authority. A clinic brand built around every doctor builds the practice.
Value check: Clinic owners get a clear model for giving every doctor visibility.

What I changed and why

- Fixed the title: it said the mistake is 'building a personal brand', but the script says the owner MUST build one. The real mistake is a clinic page that's only about the owner.
- Opened with the real conversation as a story hook.
- Added the patient benefit: patients know exactly which doctor to see.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–3s	Running a clinic with three or more doctors? If your Instagram is only about you, you're making this mistake.	OST: “Multi-doctor clinics: the owner-only mistake”
3–10s	I was speaking to a dental clinic owner with a strong personal brand. His worry: his other dentists were invisible.	Visual: one face lit, others greyed
10–17s	Here's what I recommended. Keep your personal brand as the owner, and build a separate clinic brand around the whole team.	OST: “Owner brand + Clinic brand”
17–28s	Give each doctor a lane. One for veneers, one for implants, one for orthodontics. Then feature each of them on the clinic page, talking about their specialty.	OST: “Veneers · Implants · Ortho”
28–36s	Now every doctor gets visibility, patients know exactly who to see, and the clinic becomes a brand people recognise.	Visual: all faces lit
36–40s	Your brand builds authority. Your clinic brand builds the practice.	OST: “Authority + Recognition”

CTA: If you run a multi-doctor clinic and want a brand built around your whole team, DM me ‘TEAM’.

Caption: Your personal brand and your clinic brand do different jobs. Multi-doctor clinics need both.

SCRIPT CLINIC 2 · BOFU · ~60 S

30-day profile breakdown for a cosmetic dentist

Format: Screen recording of the dentist's profile (with permission) + voiceover, on-screen bio rewrite.

Score 5 → 8.5

Core message: Followers aren't the goal. Patients who trust the doctor before they book are.
Value check: Doctors watch a live, specific profile rebuild they can copy.

> **⚠ Before posting**
> Get written permission from Dr. Stuetzer before naming or showing her profile. If you can't, anonymise it.

What I changed and why

- ⚠ This names a real doctor. Only post with her written permission. Otherwise blur the profile and say 'this Ohio cosmetic dentist'.
- The original was almost word for word the competitor reel you shared for tonality. I rewrote it in your own words so it doesn't look copied.
- Removed the '10k in 30 days' promise. Unless she's your client and you can show the result, it can backfire.
- Filled the empty bio line 3 with a placeholder you must complete with her real years of experience.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–4s	Here's exactly what I'd change if I were growing this cosmetic dentist's Instagram over the next 30 days.	Visual: her profile (with permission) or blurred
4–20s	Day one: the foundation. Two brand colours and one font across everything. Then a bio that passes the five-second test. Line one: Cosmetic Dentist, Mayfield Heights, Ohio. Line two: natural, confident smiles. Line three: [X] years of experience. Line four: book a consultation.	OST: bio rewritten live, line by line
20–26s	And the name field becomes 'Dr. Name, Cosmetic Dentist, Cleveland', so she shows up when local patients search.	OST: "Searchable name field"
26–40s	Days two to five: research. I'd find cosmetic dentists with big audiences and study their outlier videos, the ones with five times more views than followers. For cosmetic dentistry, one format keeps winning: show the finished smile first, then how you got there.	OST: "5× outliers · Result first"
40–52s	Then the 30-day plan: 70% proven formats, 20% doubling down on her own winners, 10% experiments. Mixed with storytelling, education and real before-and-afters, with consent.	OST: "70 / 20 / 10"
52–60s	Because followers aren't the goal. Patients who trust her before they book are.	OST: "Trust > followers"

CTA: Want me to break down your profile like this? Comment AUDIT.

Caption: A real profile rebuild: bio, search, research and a 30-day plan. Shared with permission.

SCRIPT CLINIC 3 · MOFU · ~40 S

Day 1 of building a clinic brand: I don't film anything

Format: Dynamic talking head + fast screen-recording cuts of a clinic profile being edited. **Score 8 → 9.5**

Core message: Brand first, content second. Define who the clinic is before filming anything.
Value check: Clinic owners get the 3 decisions to make before any content is filmed.

What I changed and why

- Added a CTA. The original had none.
- Tightened the hook into one line with the surprise up front.
- Removed the duplicated 'Day 1 of building a clinic brand' line and the stray timestamps.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–3s	On day one of building a clinic brand, I don't film a single video. Here's what I do instead.	OST: "Day 1: I film NOTHING."
3–12s	First, I ask the owner one question: what do patients get here that they can't get down the street? That answer becomes the clinic's positioning.	OST: "1. Core positioning"
12–20s	Second, I pick the clinic's flagship treatments, like smile makeovers, implants or aesthetics, and build the whole strategy around them. No generic messaging.	OST: "2. Flagship treatments"
20–30s	Third, I rebuild the profile. Clinic name, specialty and city in the name field, so locals find you. One colour palette, one font, so the whole practice looks like one premium brand.	Visual: profile edited live · OST: "3. Profile rebuild"
30–38s	If you start filming before you know who your clinic is, you'll look like every other practice in town. Brand first, content second.	OST: "Brand first. Content second."

CTA: Clinic owners: what's the one thing patients get at your clinic that they can't get elsewhere? Tell me in the comments.

Caption: Most clinics start with content. The best ones start with positioning. Here's my day one.

SCRIPT 4 · MOFU · ~40 S

Two dermatologists, same content: one is booked for weeks

Format: Split screen: Dermatologist 1 vs 2, with a leak counter (1–5) on the left side. **Score 8 → 9.5**

Core message: The content did its job. The patients leaked out after it.
Value check: Doctors get the 5 leak points and a 2-minute exercise to find their biggest one.

What I changed and why

- Fixed typos ('teo' → 'two') and the gender mismatch ('his socials'): now 'their'.
- Made each leak one short sentence, so it lands every 4–5 seconds.
- Kept your strong action step (find the biggest drop) and CTA.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–4s	Two dermatologists. Both post evidence-based content. One is booked for weeks, the other is empty. Here's why.	OST: “Same content. Different calendars.”
4–8s	It's not the content. The content did its job. Dermatologist one's patients leaked out afterwards, in five places.	OST: “5 leaks”
8–12s	One: a DM came in and was never answered.	OST: “Leak 1: unanswered DM”
12–16s	Two: someone asked about price and got a reply the next day, or never.	OST: “Leak 2: slow price reply”
16–20s	Three: they said ‘I'll think about it’ and nobody followed up.	OST: “Leak 3: no follow-up”
20–24s	Four: happy patients left and were never asked for a review.	OST: “Leak 4: no review ask”
24–29s	Five: so the next person sees a great Reel, and almost no reviews.	OST: “Leak 5: weak proof”
29–40s	Here's what to do. Take your last Reel. Write down views, profile visits, DMs and bookings. Find the biggest drop between two numbers, and fix that before you film anything new.	OST: “Views → Visits → DMs → Bookings: find the biggest drop”

CTA: Send this to a doctor friend who posts a lot and wonders why the calendar's empty.

Caption: Great content isn't the whole story. Here are the 5 places patients leak out after they find you.

SCRIPT 5 · MOFU · ~40 S

One personal message beats ten promotions

Format: Split screen: left, a generic broadcast (crossed out); right, a personal message highlighted word by word.

Score 9 → 9.5

Core message: A discount tells patients you need them. A personal message tells them you remember them.

Value check: Doctors get a 4-part message formula they can use today.

What I changed and why

- Already one of your strongest scripts. Only small tightening.
- Added a one-line consent note (send only to patients who agreed to hear from you). That builds trust with careful doctors.
- Ended on the formula, the line people screenshot.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–3s	Stop sending patients '20% off this month'. Send this instead.	OST: "Generic vs personal"
3–10s	Most clinics send the same message to everyone. 'Dear patient, we have an offer this month.' It reads like it was sent to a thousand people, because it was.	Visual: generic message, crossed out
10–20s	Now read this. 'Hi Sara, it's been about six months since your filler. Most patients like a top-up around now. Want me to check availability next week?'	Visual: personal message, highlighted
20–27s	The formula: her name, what she had done, why now, and one easy question.	OST: "Name · Treatment · Why now · One question"
27–35s	And no, you don't type this 200 times. Your system fills in the name and treatment date. Send it only to patients who agreed to hear from you.	Visual: CRM auto-filling
35–40s	A discount tells a patient you need them. A personal message tells them you remember them.	OST: "Remembered > discounted"

CTA: Save the formula and write one message today.

Caption: Your past patients don't need a discount. They need to feel remembered. Here's the 4-part message formula.

SCRIPT 6 · TOFU · ~55 S

Using AI in your clinic: green, amber or red flag?

Format: Rapid-fire talking head. A coloured flag (green / amber / red) pops up for each item. **Score 5 → 9**

Core message: Automate the admin. Never automate clinical judgment.
Value check: Doctors get a clear, doctor-made rule for what AI should and shouldn't do in their clinic.

What I changed and why

- Rewritten in your own words and reasoning. The original read like a transcript of another creator's video.
- ⚠ Fixed a contradiction with your own offer: the original called AI review requests a red flag, but review generation is part of your Package 2. Now it's green, as long as the timing and tone are personal.
- Added amber for things AI can draft but a clinician must check (clinical notes, patient instructions). This is more accurate and shows your medical judgment.
- Cut 'robot' and filler phrases, so each item is under 6 seconds.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–3s	As a doctor who builds AI systems for clinics, here's where I'd use AI, and where I never would.	OST: "AI in your clinic: 🟢 🟠 🔴"
3–9s	AI answering calls and messages after hours? Green, as long as it says it's AI and hands over to your team in the morning.	🟢 After-hours replies
9–13s	Automated appointment reminders? Green. Easy win.	🟢 Reminders
13–18s	Automated follow-ups after an inquiry? Green. Consistency beats memory.	🟢 Follow-ups
18–24s	Spotting patients who haven't come back? Green. Let the data find them; your team reaches out.	🟢 At-risk patients
24–29s	Review requests? Green, if they're timed after the patient sees their result and sound like your clinic.	🟢 Review requests
29–33s	Revenue per treatment analysis? Green. Most of us were never taught this.	🟢 Revenue insights
33–40s	Drafting clinical notes? Amber. Only if a clinician reviews every single note.	🟠 Clinical notes
40–46s	Patient instructions? Amber. AI can draft them, a doctor approves them, and the patient still hears them from a human.	🟠 Patient instructions
46–52s	Recommending treatment plans? Red. That's clinical judgment. It stays with the doctor.	🔴 Treatment plans
52–55s	Automate the admin. Never automate the judgment.	OST: "Automate admin. Keep judgment human."

CTA: Which one surprised you? Tell me in the comments.

Caption: AI should take work off your team, not make clinical decisions. Here's my green, amber and red list as a doctor.

SCRIPT 7 · BOFU · ~55 S

7 systems a $30k+/month clinic needs

Format: Talking head + numbered list building on screen. Quick B-roll per system. **Score 7 → 9**

Core message: Visibility brings inquiries. Systems turn them into appointments.
Value check: Clinic owners get a 7-point checklist to find what's missing.

What I changed and why

- Cut each system to one 'what' + one 'why' line. The original was ~2× too long for a Reel.
- Softened 'the first 1–2 minutes determine…' to 'the first few minutes matter', which is safer than a precise claim with no source.
- Moved the regulation note into the caption so it doesn't slow the ending.
- Ended on the core message before the CTA.

Improved script

TIME	SAY	ON SCREEN / VISUAL
0–4s	If you want your clinic doing $30k or more a month, you need these seven systems.	OST: "7 systems for a $30k+/month clinic"
4–11s	One: inquiry management. Calls, WhatsApp, Instagram, Google: every inquiry captured. The first few minutes matter.	OST: "1. Capture every inquiry"
11–16s	Two: smart booking. Booking takes one minute, not three phone calls.	OST: "2. Easy booking"
16–22s	Three: follow-up. Every inquiry followed up the same day. 'Not yet' isn't 'no'.	OST: "3. Same-day follow-up"
22–28s	Four: reviews. Ask every patient, not just the happy ones, and reply professionally to every review.	OST: "4. Reviews"
28–34s	Five: re-engagement. Remind past patients when it's time to come back.	OST: "5. Bring patients back"
34–40s	Six: a CRM. Every inquiry, appointment and message in one place, not five apps.	OST: "6. One CRM"
40–47s	Seven: KPIs. Inquiries, bookings, conversions and no-shows, reviewed every week.	OST: "7. Weekly numbers"
47–55s	Visibility on Instagram and Google brings inquiries. These systems turn them into appointments.	OST: "Visibility → inquiries. Systems → appointments."

CTA: If your clinic is missing any of these, comment SYSTEMS and I'll send you the checklist.

Caption: Getting inquiries is half the job. Here are the 7 systems that turn them into appointments. (Always implement in line with your local healthcare regulations.)

Appendix: your original scripts

1b - Tofu‼️

Script 1 — 4 things doctors post that quietly push patients away

Format: Talking head, fast cuts, one on-screen word per point ("Audio", "Tips", "Jargon", "Faces").
Hook

- Spoken: "Four things you're posting right now are quietly telling patients to book another doctor."
- On-screen: "4 posts that push patients away"
- Visual: scroll through a doctor's grid, freeze on one post.

Script

Four things you're posting right now are quietly telling patients to book another doctor
Number 1- The trending audio with a dance or a skit. I'm not saying don't follow trends but remember you are doctor not a lifestyle influencer. someone about to book a procedure is asking one question: is this dr serious? An entertaining trend makes them hesitate.
Number 2- Generic tips. "take retinol for glowing skin." Any account can say that. It shows nothing about how you think.
Number 3- Medical jargon. If a patient needs Google to understand your caption, they won't ask you. They'll scroll. So convey in their language.
Number 4- Results with no explanation. A before and after with no context only shows the outcome. Patients want to see your judgment: why this treatment, why this plan.
Here's the test for every post.
Would a nervous patient feel safer after seeing this? If the answer is no, don't post it.
Content for patients is about safety, not entertainment. Save this for your next filming day.

2b - Bofu‼️

Script 5 — If I had to grow a dentist from zero

Format: Whiteboard / screen recording with numbered steps, plus talking head intro.
Hook

- Spoken: "If I had to take a dental clinic from zero followers to a fuller schedule, these are the five things I'd do, in this order."
- On-screen: "Dental clinic from zero: 5 steps"
- Visual: blank Instagram profile appears, then steps fill in.

Script One. Fix the profile. Name field: "Dr [Name], Implant Dentist, [City]". That's what patients search. Bio says who you help and where.
Two. Pick one high-value treatment, like implants or veneers. Not twelve. Be known for something first.
Three. Answer the three questions every patient has: how much, will it hurt, how long does it take. Three videos, one each.
Four. Show the clinic, not only the dentist. The chair, the team, the room. A nervous patient is reassured by seeing the place.
Five. Make the next step obvious. One link or one keyword to DM. And reply the same day.
That last part matters more than people think. Content decides who reaches out. How fast you reply decides who actually books.
Takeaway: Content gets the inquiry. Your response decides the booking. CTA: Save this and send it to a dentist you know.

If I had to take a dermatologist from zero followers to 10k in the next 30 days, here's the exact framework that I would use.
First I am going to find my target audience and then I'll divide the content into niches and sub niches.
With this documented information, I'll find the top dermatology creators on all social platforms and I'll find their viral formula.
Then I'll select 15-20 of their top performing videos.
Now from these videos, I'll study what verbal, written and visual hooks they have used, what formats get the most saves, what content angles are they using, what topics are bringing the most engagement.

Now from that research, I'm going to create 10 content pillars, each with five subtopics and three content angles.
and build the entire strategy around them.
One of the Content pillar would cover education, common concerns, treatments, myths and we will have 9 other pillars covering the entire content plan.
Now, we'll divide our content using two frameworks.
First, the marketing funnel: Top of the funnel for awareness, so people discover you; middle of the funnel for building trust and credibility; and bottom of the funnel for converting potential patients into actual patients.
Second, we'll categorize content by its purpose and format: reach, inquiries, and conversions.
For Reach & views, we will create B-rolls, trends, rating videos, etc
For patient inquiries & followers, Educational talking-head videos, patient-focused storytelling etc
And for Conversions & bookings, Patient case studies, procedure breakdowns etc…
Finally, we'd distribute these formats strategically across a 30-day content calendar creating 40-50 peices of content.
Because the goal isn't just to post consistently. It's to make every video serve a purpose, attract attention, build trust, & turn the right viewers into patients.
If you want the detailed frameworks breakdown, comment frameworks I'll send it in the dms.

3b - Mofu ‼️

Written - If you're a doctor who doesn't feel confident on camera, this is exactly how you can fix it…

If you as a doctor feel uncomfortable on camera, know that I felt exactly the same way & this is how I fixed it.
Just like you I studied anatomy, physiology, pharmacology & nothing about media, nothing about being on camera. So if you feel awkward or not confident enough to make content, I understand that completely. I've been through this for months and here's what changed it for me. I started rewiring my mind that I'm not speaking to strangers. I'm speaking to the same doctors I've been speaking to throughout medical school , it's just that now I'm speaking through a camera. And that's exactly what you can do too. You're not speaking to some random audience. You're speaking to your patients, the same patients you already know how to talk to, they're just not in your clinic with you. Once you see it this way, you already know exactly what and how to do. You've been doing it for years.
If you want to build that same confidence on camera, come along, I'm sharing exactly how you can do it.

4b - Tofu

Script 6 — If I were a dermatologist, this is what I'd post this week
Format: Talking head + a weekly calendar graphic on screen. Day labels appear as you speak.
Hook

- Spoken: "If I were a dermatologist starting Monday, these are the five posts I'd film this week."
- On-screen: "Derm content: this week's 5 posts"
- Visual: calendar Monday to Friday, empty, filling day by day.

If I were a dermatologist, this is what I'd post this week

Monday: One myth your patients keep repeating. Correct it simply.
Tuesday: A transformation video. Show the outcome first, then explain how you achieved it. Use real results with patient consent, and clarify that results vary from person to person.
Wednesday: Show what a first consultation actually looks like. People feel more comfortable when they know what to expect.
Thursday: Answer one question a patient asked you this week. Keep it under 30 seconds.
Friday: Share a bit of your story. Why did you choose dermatology? A day in your life etc…
Saturday: Recreate an educational video format that's already performing well in your niche.
And here's the mix behind it. About seventy percent should be formats already working for other dermatologists. Twenty percent should repeat what has worked for you previously. Ten percent is experiments. That way you're not guessing, and you're not copying. You are creating One week of posts that builds trust, not just views. Save this as your Monday plan.

5b - mofu

Here’s why Dubai doctors must have good online visibility!

Imagine someone in Dubai or anywhere across the world is looking for a cosmetic dentist or a dermatologist.

They find two clinics. Both are doctor-owned and offer the treatment they’re looking for.

But one doctor has an active online presence across different platforms, shares informative, evidence-based content, and has good reviews.

The other has a profile that looks like every other doctor, with very little content.

The patient doesn’t know either doctor personally. They’re forming their first impression based on what they can see online.

And this matters particularly in Dubai, Bcz it welcomed over 691,000 international medical tourists, according to official reports. Dentistry and dermatology being top in-demand specialities.

So Your potential patients aren’t just local. They may be comparing doctors from different countries before deciding where to seek treatment.

And often, your online presence is one of the first things they encounter.

So, as a clinic owner, ask yourself:

Is your expertise clear from your online profiles?

Can a potential patient understand the treatments you offer?

And can build trust before contacting you?

If not, then Build a personal brand that communicates your expertise, builds trust, and helps patients make informed decisions.

And if you’re a cosmetic dentist or dermatologist looking to build a personal brand like this, this is exactly what we do.

6b - Bofu

PART 3 — BOTTOM OF FUNNEL (Conversion)

Script 9 — The doctor vs influencer test: which one does your page look like?
Format: Screen recording of a profile + talking head. Score appears on screen. (You'll need the one-page checklist ready to send.)
Hook

- Spoken: "Open your Instagram. In ten seconds, does it look like a doctor's page or an influencer's?"
- On-screen: "Doctor page or influencer page?"
- Visual: your profile, then a split showing two grids.

The doctor vs influencer test: which one does your page look like?

Look at your profile, In ten seconds, does it look like a doctor's page or an influencer's?"

Script Here's the three-part test.
One. Look at your profile for five seconds. Can a stranger tell your specialty and your city? If not, that's a miss.

Two. Look at your last nine posts. How many are about a patient's problem? And how many are about a trend, or maybe a sound?

Three. If a patient had one minute on your page, would they trust you with their face, their teeth, or their surgery?

Two or more misses means your page is working against you. And it's fixable.
Your Instagram shouldn't make you look famous. It should make patients trust you.

Fame and trust are different goals. Patients book on trust.

If you want the full checklist, comment TEST and I'll send it to you.

7b - Tofu/Bofu

Script 11 — A reel with 200K views and zero patients isn't a win
Format: Talking head + screen recording of an analytics screen (use dummy numbers) with a funnel graphic: views → visits → DMs → bookings.
Hook

- Spoken: "A reel with 200,000 views and zero patients isn't a win. It's an expensive compliment."
- On-screen: "200K views. 0 patients."
- Visual: big view count, then a "0" slams in next to bookings.

200K views and zero bookings vs. 1,000 views and two bookings.

A reel with 200K views and zero patients isn’t a win. It’s an expensive compliment.

I see doctors celebrate views all the time. And I get it. It feels good.

But ask yourself: how many of those 200,000 people could actually walk into your clinic?

Take my account, for example. I create content specifically for doctors because they’re my target audience. I don’t need to reach everyone just the right people.

And that’s exactly how you should approach content. Don’t create content just to get views. Create content that speaks directly to the patients you want to attract.

If your videos reach the wrong audience or don’t tell people what to do next, those views won’t necessarily turn into bookings.

So track the whole path: views, profile visits, DMs, calls, and bookings. That’s your real funnel.

Then fix three things.

First, mention your treatment in the hook so the right patient stops scrolling.

Second, give them one clear next step.

Third, reply quickly, because a patient who messages you and waits will message someone else.

Views are attention. Patients are the result.

If you want my views-to-patients tracker, comment VIEWS and I’ll send it over.

Clinic 1 - Tofu‼️

The biggest mistake multi-doctor clinics make? Trying to build a personal brand. Do this instead!!

I was speaking to a dental clinic owner who already had a strong personal brand, but he had one concern.

He wanted his other dentists to get visibility, too.

And here’s what I’d recommend.

If you run a clinic with three to five doctors, you must build your personal brand as the owner, but build a separate clinic brand around the entire team.

Here’s how.

Identify each doctor’s speciality. One focuses on veneers, another on implants, and another on orthodontics.

Then create content featuring each doctor, showcasing their expertise on the clinic’s social media page.

This way, every doctor gets visibility, patients know which doctor to visit for their specific needs, and the clinic builds a recognisable brand around the entire team.

Your personal brand builds your authority as the owner, which is the most important. And Your clinic brand builds recognition for the whole practice.

If you run a multi-doctor clinic and want to build a clinic brand that’s exactly what we do.

Clinic 2 - bofu

🎬 Final Script: 30-Day Blueprint for Dr. Daniela Stuetzer
 Target Duration: ~60 Seconds
 Tone: Respectful, authoritative, high-value, and growth-focused

[0:00 – 0:08] The Hook
Voiceover:
Here’s how I’m taking this cosmetic dentist from 4.4k to 10k followers in 30 days.
(Visual: Screen recording showing @drdanielastuetzer’s Instagram profile)
[0:08 – 0:22] Day 1: Foundation Optimization
Voiceover:
Her profile is already very nice, but to hit that 10,000 follower milestone, we’re starting with a foundation rebuild.

First, picking two clean brand colors and consistent fonts across her entire profile.
Second, I’ll fulfill the 5-second rule for her bio, people should instantly know who she helps or what transformation she offers.
So we’re fixing it:
 Line 1: Cosmetic & General Dentist | Mayfield Heights, Ohio
 Line 2: Helping patients achieve their dream smiles with confidence
 Line 3: “”+ Years of experience
 Line 4: Direct call-to-action to her consultation link
Then, we optimize her tagline to "Dr. Daniela Stuetzer | Cosmetic Dentist | Mayfield Heights, Ohio, Cleveland "
so she actually shows up in local search.
[0:22 – 0:38] Day 2–5: Content Research & Outcome-First Method
Voiceover:
Days 2 to 5: Content research. We extract viral formulas from top dentists with 500k+ followers using the 5x rule—if a creator has 100k followers but a video hits 500k views, that’s an outlier video.
We document the verbal, visual, and written content angles.
For cosmetic dentists, transformation content using the outcome-first method works great every single time. Show the stunning after smile first, then reverse-engineer the process. This triggers an instant curiosity gap.
[0:38 – 0:50] Day 5–30: The 70-20-10 Scripting Framework
Voiceover:
Days 5 to 30: We script using the 70-20-10 rule.

 70% uses viral outlier hooks researched from top creators.

20% doubles down on her winning videos by templatizing the format—keep the hook structure, just swap the topic.

10% experiments with new creative formats.

[0:50 – 1:00] The Content Fix & Call to Action
Voiceover:
To grow her page, we’ll focus on high-converting hooks, personal storytelling, transformational before-and-afters, and educational authority content.

The trifecta of educational storytelling, authority content, and psychological proof is what builds personal brands that actually book patients—not just gain follower counts.
Comment "AUDIT" below, if you want to audit your profile!

Clinic 3 - mofu‼️

Script 4: Building a clinic brand from scratch, day one (MOFU)

🎬 Revised Script: Rebuilding a Clinic Brand from Scratch (MOFU)
Target Duration: ~45–55 Seconds
Format: Dynamic talking head + fast screen recording cuts of a clinic Instagram profile being updated
On-Screen Hook Text: "Day 1 of rebuilding a clinic brand: I film NOTHING."
[0:00 – 0:08] The Pattern-Interrupt Hook

Day 1 of building a clinic brand from scratch

Voiceover:
Here’s how I would build a clinic brand... on day 1 I won’t film a single video. This is what I do instead.
Voiceover:
First, I ask the clinic owner one question: "What do patients get here that they can’t get down the street?" That single answer becomes the clinic's core positioning.
(Visual: Text overlay: "1. Find Your Core Positioning")

Voiceover:
Second, I identify the clinic’s top high-value flagship treatments and build the entire content strategy around those core offers—no generic messaging.
(Visual: Quick cutaway showing a list of signature clinic treatments like Smile Makeovers / Dental Implants / Aesthetics)
Voiceover:
Third, I rebuild the Instagram profile. Clinic name, primary specialty, and city in the name field so locals actually find you in search. One clean color palette and one font system so the entire practice looks like one cohesive, premium brand.
(Visual: Screen recording of a clinic Instagram profile bio and name field being edited live)
[0:44 – 0:55] The Mic-Drop Takeaway & CTA
Voiceover:
That’s day one. Strategy over content. Because if you start filming before you define who your clinic is, you’ll end up looking like every other practice in town.

Brand first, content second.

4 - mofu‼️

These are teo dermatologists, both posting evidence-based content. One isn’t getting any booked appointments, while the other is booked for weeks. Here’s why.

3–8s) It’s not the content. The content did its job. But for dermatologist one, potential patients leaked out afterwards, in five places.

(8–12s) One. Someone sent a DM, and dermatologist one left it unanswered.

(12–17s) Two. They asked about price, and dermatologist 1 replied the next day, or never.

(17–21s) Three. They said they’d think about it, and dermatologist one never followed up.

(21–25s) Four. The few patients who did book came, were happy, and dermatologist 1 never asked the feedback.

(25–30s) Five. So the next person who finds dermatologist one sees a great reel and almost no reviews across his socials.

(30–40s) Here’s what to do. Take your last reel. Write down views, profile visits, DMs, and bookings. Find the biggest drop between two of those numbers. Fix that gap before you film anything new.

CTA: Send this to a doctor friend who posts a lot and wonders why the calendar’s empty.

5 - mofu

Script 4 (MOFU): One personal message beats ten promotions

Format: split screen. Left: a generic broadcast, crossed out. Right: a personal message, highlighted word by word as you explain.
Spoken hook (0-3s): Stop sending patients "20% off this month". Send this instead.
On-screen text: Generic vs personal

Stop sending patients "20% off this month". Send this instead.

Most clinics send the same message to everyone. "Dear patient, we have an offer this month." It reads like it was sent to a thousand people, because it was.

Now read this one. "Hi Sara, it's been about six months since your filler. Most patients like a top-up around now. Want me to check availability next week?" She knows you remember her. She knows why you're writing. And there's one easy question to answer.

The formula. Her name. What she had done. Why it's the right time. One easy question. That's the whole message.

And no, you don't type these by hand for 200 patients. Your system can pull the name and the treatment date and fill it in for you. The message just has to sound like it came from you specially for her.

A discount tells a patient you need them. A personal message tells them you remember them.
So One personal message beats ten promotions
Save the formula and write one today.

6 - Tofu

Using Ai in your clinic
Red flags and green flags

Using AI receptionists for after hours.
I'm going to say green flag.
It's better to have at least a robot answer the calls after hours rather than have no one answer the calls.
Using AI to automate patient follow-ups.
Green flag.
It's better to have some level of consistency.
And usually automating this with AI allows for follow-ups to be consistent.
Using AI to draft clinical notes.
I'm going to put red flag.
I don't think AI is ready for this yet.
We have to have a human writing clinical notes.
Otherwise, we may have some errors.
And this is an important thing to not have errors in.
Using AI to analyze your revenue per treatment.
I'm going to say green flag because it's good to have some interpretation and most people don't have the business or financial analytical skills.
Using AI to request patient feedback.
I'm going to put red flag here mainly because asking for patient reviews is an intimate thing.
It should be from a person to another person.
Using AI to identify which patients are at risk for not returning.
I'm going to put green flag.
Hey, why not have a robot or some analytics or AI tell you all the different metrics of who's not returning.
Using AI to automate appointment reminders.
I'm going to say green flag here as well.
Using AI to create patient instructions.
I'm going to say red flag for now.

And the reason behind that is because patient instruction should be explained by a human in person.
Using AI to recommend treatment plans.
Absolutely red flag.
We need to make sure that recommendations for treatment plans are done by a provider, by a physician, by a clinician, not by AI.

7 - Bofu

7 Systems to build a $30k+/ month clinic

If you want to build a clinic that generates more than $30k per month, these are the seven systems you need in your clinic.

Number one: Patient Inquiry Management
Whether patients contact you through calls, WhatsApp, Instagram, or Google, every inquiry needs to be captured and managed. the first 1–2 minutes can determine whether they actually visit your clinic or not.

Number two: Smart Booking.
Make it easy for patients to book appointments without unnecessary delays.

Number three: Patient Follow-Up.
Every inquiry should receive a timely follow-up, ideally on the same day. Patients who don’t book immediately may still convert with the right follow-up system.

Number four: Reviews and Reputation Management.
Patients often check reviews before choosing a clinic. Encourage genuine patient feedback and respond professionally to negative reviews to build trust.

Number five: Patient Re-engagement.
Don’t lose touch with existing patients. Use timely reminders and relevant follow-ups to reconnect with patients who haven’t returned when appropriate.

Number six: Clinic CRM.
Keep patient inquiries, appointment details, follow-ups, and communication organized in one place instead of managing everything manually across different platforms.

Number seven: Performance KPIs.
Track your marketing spend, inquiry volume, bookings, patient conversions, and no-shows. Review your results every week so you know what’s working and where you need to improve.

And remember, your clinic’s visibility across platforms like Google Maps, Instagram, YouTube, and relevant healthcare directories can help bring in inquiries but you also need systems to convert those inquiries into appointments.

All systems should be implemented in accordance with your country’s healthcare regulations and guidelines.

If your clinic is missing any of these seven systems, comment “SYSTEMS” below, and I’ll send you the systems.
